Summary

This summary is provided for your convenience. Complete report on the following pages.

Legionella Environmental Culture Test – New York			
Location	Result	Concentration	
1. MOB Cooling Tower	Not Detected		
2. Main Cooling Tower	Not Detected		
3. 5N – Shower	Not Detected		
4. 5S – Sink	Not Detected		
5. 4N– Shower	Not Detected		
5. 4S – Sink	Not Detected		
7. 4 CCD 438-01	Not Detected		
3. 4 CCD 440.1	Not Detected		
9. 3N – Sink	Not Detected		
10. 3S – Ex Rm 7	Not Detected		
1. 2N – Sink	Not Detected		
2. ED XE3	Not Detected

NOTES

Legionella Environmental Culture Test - New York

- CFU/mL = Colony Forming Units per milliliter of sample

- Limit of detection (LOD): 10 CFU/mL for hot water tanks and non-potable water (cooling towers); 1-10 CFU/mL for potable water. If less than recommended volume is concentrated, sensitivity may be affected. If liter sample is processed, the LOD is <1 CFU/mL.

- Results are reported as Not Detected, Positive, or Uninterpretable.

- Uninterpretable result is due to culture overgrowth by non-Legionella bacteria

- Method: ISO 11731:2017 (E). QA/QC performed on the date processed. Turnaround time is 7-10 days.

- Certified for Legionella culture analysis by New York State Department of Health ELAP. ELAP lab ID no.12024

- Isolates saved upon request. Request must be received 1 week from receipt of report. Additional charges may apply.

-On receipt, SPL lab checks samples for chlorine neutralization by sodium thiosulfate in the collection bottles. Neutralization of other biocides that may be present is not checked.

The data and information on this, and other accompanying documents, represent only the sample(s) analyzed. This report is not to be reproduced in whole or in part without the expressed consent of SPL.
